LOOKING BACK ON 2018 AT MOUSTACHE...

HISTORIC DOUBLE AT THE FIRST EMTB FRENCH CHAMPIONSHIPS WON BY JULIEN ABAJON AND NÉLO FORWIN-GANIER ON THEIR SAMEDI 27 TRAIL CARBON.

VICTORY FOR THE SAMEDI 27 TRAIL 4 IN THE EMTB OF THE YEAR ELECTION AT FRENCH MAGAZINE VÉLO-VERT.

See pages 106-107.

BEST OF 2018 – WORLD OF MTB IN GERMANY WITH THE TRAIL 11.

“THE MOUSTACHE SAMEDI RACE 11 IS BY FAR THE BEST BOSCH BIKE THAT WE HAVE TESTED.

If you are looking for a high and reliable ride with great handling, it’s this one!”

MOUSTACHE IS ON THE Podium AT THE “BIKE OF THE YEAR” ELECTION FOR THE 3RD CONSECUTIVE YEAR.

VICTORIES FOR THE BRAND, FOR THE TEAM AND FOR YOU ALL!! MERCI :-D
Such were our first words, our first beliefs when we started Moustache several years ago. They are just as relevant 8 years on, but we didn’t imagine we’d be leaving so many cars behind so many garage doors. All that, thanks to you!

And thanks to this magic tool, E-bikes! It’s the bike that opens opportunities. E-bikes are opening the way to new experiences, to new horizons, to new users. The range of possibilities they offer has almost no limits.

In 2015 we designed the Samedi 27 Xroad, to get about throughout the week, to commute to work or head to the shops… but also to enjoy a stunning trail on the evening or weekend, a trail that’s impossible to resist, and which takes you where it sees fit. It’s up to you to explore far and wide, to let go and to enjoy!

This year, you can push the adventure even further with the full suspension version of our Samedi 27 Xroad: even more comfortable, even more capable off-road, and just as useful for the day to day. Certainly the best example of the Moustache spirit!

Our initial range included 7 models. The range you’ll find in the following pages includes over 55. 55 bikes that we have developed with care, with passion, with conviction! 55 ways to have fun! 55 good reasons to take a bike and leave the car in the garage!
The moustache has been an integral part of the history of the bicycle for a long time now. Look no further than the famous moustache handlebars! Our handlebars are innovative and can be considered as a modern take on the famous moustache handlebars of the past.

Every moustache is unique, every moustache is recognizable, every moustache has a strong identity, just like our bikes!

Moustache is the strong belief that e-bikes are an incredible opportunity for the development of cycling. As we see it, they are an exciting alternative to cars. A quality e-bike can bring happiness, whether it is in an urban environment, or leisure rides, or for more intense riding.

It’s a certain vision of the e-bike. A different, modern, innovative and qualitative vision. It’s the desire to consider the rider as our priority, the center of our thought and development process. It’s the desire to offer bikes that are both unique and rewarding by combining design, comfort and ease of use.

Moustache is also a balance bike for learning to kids. It’s the only bike without electric pedal assistance, but for us it’s one of the most important bikes in our collection. It’s a first bike, the one that will ignite a passion in the youngest of riders.

Moustache is a structured collection with 8 families to cover all the different riding needs: urban, all-road, road, mountain bike and kids bikes, so you can find the right Moustache for you!
Moustache is based in the Vosges region of France, home to our childhood memories, our families, and our values. We strongly believe that the strength of a company is based above all on its employees, and we’ve built ours around our complementary skills. After starting out as two bike-lovers crazy enough to embark on such an adventure – Manu (development) and Greg (sales) – we now have more than 80 people working on the development and production of our bikes.
Les guidons BARAMIND réduisent la fatigue musculaire du membre supérieur et préviennent les Troubles Musculo Squelettiques.

HANDLEBAR
Like our frames, it’s made from 6061 alloy, and it also gets the same thermal treatments for maximum resistance. There are four versions:
1. Our first model specially developed for the Lulok 26 offers a very upright position, for comfort and the best visibility in towns.
2. Samro 28 has a lower version, for a balanced position particularly well suited to long-distance.
3. For the Friday 27 and Samro 27 Xroad, it’s a round semi-disk Moustache handlebar that guides the way. The 50° disk feels particularly appreciable and is very versatile.
4. Finally, our new version of the Postbar was developed with our friends at Baramond. Their technology enables us to filter out small impacts and vibrations in the same manner as a very large section fork. You’ll find it on our new Friday 28 range.

We’re warning you though, once you try it, you’ll never want anything else.

MUDGARDS
At Moustache, we’ve never really liked mudguards. They’re never positioned correctly, they always move, and they rarely look good... So we decided to start from scratch and develop our own mudguards!

The exclusive Moustache mudguards are tubular and, therefore, very stiff, yet still very lightweight. And they are concentric to the wheel so it’s easier on your eyes too. We developed three exclusive profiles, the guards are anodized and then bent to adapt to the size of the wheel.

A mudguard may appear simple, but it was actually a complex development. But we think you’ll agree that it was worth it.

RIMS
Comes as best as possible the dynamism of the chassis and motor, this was the starting point of our engineers developing our new double cavity wheels. The aluminum 6061 E rims are welded and heat treated, then sandblasted to increase their stability and strength. The sides are specially reinforced to resist impacts. The asymmetric profile enables us to ensure a consistent tension between the 2 layers of spokes, for improved stability and dynamism. The 21mm nipple width is perfect for urban lines up to 25/10 wide, and is also compatible with hawes free. The hubs with annular bearings reduce friction, to yet again improve dynamism and performance.
It’s the strong belief that performance, quality and service are the foundation of any bicycle. Our partnership with Bosch is based on these same values. Bosch is currently the most developed and efficient system that exists... and it’s produced in Europe.

**ACTIVE LINE PLUS**

Driving pleasure at its best! The new Bosch Active Plus motor, ultra-natural, quiet, lightweight and reliable ensures even more driving pleasure.

The maximum torque of up to 50 Nm offers progressive acceleration and ideal assistance for city rides or tours. Absence of friction allows to exceed the cutting speed of 25 km/h without even realizing it – just awesome!

**PERFORMANCE LINE CRUISE**

Dynamic and sporty assistance up to 63 Nm gives you more power from the start and powerful driving in all situations.

**PERFORMANCE LINE CX**

With its maximum torque of up to 75 Nm, the Performance Line CX offers a powerful motor for demanding riders. In eMTB mode, the cyclist always has the necessary power at the right time. Benefit from a perfectly dosed support of up to 300% with incredible dynamic and unique traction.

**E-MTB MODE**

A mode for eMountain Bikers, eMTB mode replaces the current Sport mode in the Performance Line CX range and varies between Tour and Turbo support modes. Thanks to a maximum torque of up to 75 Nm, the motor dynamically boosts the cyclist’s own power between 120% and 300%. Depending on the pedaling power, the progressive assistance automatically adapts to each way of pedaling.

**WHY?**

**ASSISTANCE** | **TORQUE**
--- | ---
Tour | 50% | 40 Nm
Turbo | 270% | 50 Nm
Nominal continuous rated power according to EN 15194 | 250W
Max. mechanical power off cadena | 415W/87rpm

**SYSTEM BOSCH**

**ACTIVE LINE PLUS**

Efficient and progressive. Perfect for daily use.

**PERFORMANCE LINE CRUISE**

Powerful and sporty.

**PERFORMANCE LINE CX**

High torque and sporty.
Autonomy is extremely variable. It is influenced by many parameters, the type of engine, battery, bike, position, user weight, elevation, type of terrain, wind, light, gearshift management, etc. …

Autonomy is extremely variable. It is influenced by many parameters, the type of engine, battery, bike, position, user weight, elevation, type of terrain, wind, light, gearshift management, etc. The data validated in laboratory are sometimes distant from the real conditions. Bosch has therefore developed a very precise simulator that can calculate the autonomy of your bike according to all these parameters and your use. Perfect to choose the capacity of your battery when several options are available. You can find the simulator at www.moustachebikes.com/en/autonomy.
INTEGRATE A STANDARD BATTERY

HIDDEN POWER For this crazy project, the challenge was not only to integrate the battery, but also to minimize volume. We had to optimize every single, edge and millimeter. We also had to secure the limits of hydroforming techniques by increasing the pressures beyond possible to control each cm³ of tube.

INTERCHANGEABILITY, AVAILABILITY, COMPATIBILITY

The battery we already use could hide Power concept is the use of a standard boost battery that can be easily swapped with the largest number of bikes in the market. For example, when two people with different morphologies commit to long rides, how easy is to exchange the battery between the two people吗？To balance the asymmetry, this also seems the possibility of going on vacation armed with this battery and not need to take one size or another for example. And what is more reassuring in terms of service level than having a standard product and not a specific one.

EASY TO USE

The battery has a practical handle, is easy to install, easy to retract from the top, easy to carry.

PROTECTED

The battery is integrated inside. It is protected from external aggressions and in the all-weather removable cover it is protected from impacts metted inside the carbon laminate tube.

STIFFNESS

Frame design, in particular the down tube, provides a great rigidity and solidity to the frame. It is thanks to the facets and edges of the tube as well as to the optimized cutting, reduced to the maximum that the positive result is obtained.

POSSIBILITY TO CARRY A 2nd BATTERY

You may already have a second battery, 180-200 or 160Wh. You can continue using it and take a car too if you commit to expand your idea.

CENTRE OF GRAVITY

This light battery, only 5 kg, very well positioned at the center, positively influences the positioning of the center of gravity and dynamic behavior.
LUNDI 24
We are convinced that it’s possible to change our habits and leave the car in the garage, each Monday morning, and every other day of the week!

FRIDAY 28
New and ship. Reduced to the essentials, but lacking nothing! As at ease between here and there as heading up to the third floor without a lift...
We are convinced that it’s possible to change our habits and leave the car in the garage, each Monday morning, and every other day of the week!

LUNDI 26

- LUNDI 26.1
- LUNDI 26.2
- LUNDI 26.3

All available in 8 colors.
LUNDI 26 IS ICONIC!

The first born of the Moustache family, it hasn’t changed and has yet to get its first gray hair! It’s still as unique and symbolic of the brand. That’s why we love it!

LUNDI 26 TAKES CARE OF YOU!

Its innovative triple cavity frame has great lateral stiffness for the best stability and security, but it also has vertical flex to protect you from any bumps and bumps in the road, further aided by the wide tires. These wide tires also help guard against getting wheels trapped in track rails or drain covers, and have anti-puncture protection.

Lovely and soft, the Royal Wave or Royal Hertz saddle will make sure sensitive areas are well protected :)

You can always rely on the robust Suntour Moustache mudguards, perfectly centered on the wheel to protect you whatsoever the weather.

As for the special raised Moustache handlebar, it offers a secure upright position giving you a panoramic view of your surroundings.

The integrated LED lighting, positioned high on the bike, ensures you’ll always see and be seen.

And if you need to stop in an instant, nothing will get you in a half faster than the powerful and progressive Shimano hydraulic disc brakes.

LUNDI 26 IS PRACTICAL!

« HOP »

The open low step frame makes it easy to get on the bike.

« CLIC »

The Moustache by Ortlieb pannier takes just 3 seconds to attach thanks to the luggage mount with integrated QL3 supports.

« CLAP »

On the Lundi 26.2 and 26.3, the leak under the seat stays means your bike can be secured in an instant for any short stirs. And if you need to leave your Lundi 26 for a longer period, the Axis chain that’s an optional extra enables you to attach it easily to anything.
LUNDI 26.1

The most accessible Lundi, intuitive, acoustic and quiet. At ease everywhere!

New and shiny.
Reduced to the essentials, but lacking nothing!
As at ease moving between cars as heading up
to the third floor without a lift.

FRIDAY 28

- FRIDAY 28.1
- FRIDAY 28.1 OPEN
- FRIDAY 28.3
- FRIDAY 28.3 OPEN
FRIDAY 28 IS LIGHT!

Inevitably, we put it on a diet... by replacing the suspension fork with an aluminium fork and by using our new Moustache Fixtbar handlebar. Made in France by our friends at Barimar, it filters vibrations just as well as a wide-tire. And because we can shed weight with the tires, we’ve chosen Continental Contact Speed: light, grippy and fast rolling!

And there we have it. 9kg less on the scales! Perfect result!

FRIDAY 28 IS LIVELY!

Several kilos less definitely helps, but on top of that, the Friday 28 frame uses our multi-carbon extruded tubes. It’s light, stiff and extra lively! Perfect for accelerating at red lights and weaving between cars.

FRIDAY 28 is being especially designed for the Bosch Active Plus motor. This is extra quiet, light, and so intuitive to use that you’ll surprise yourself by passing the 25 km/h limit without even noticing it. We love it!

FRIDAY 28 IS MINIMALIST BUT ALSO PRACTICAL!

Taking off what’s superfluous doesn’t mean that we miss out.

And especially not on the Moustache Quick-Park stem which means we can fold the handlebar by 90° in just a few seconds. Very handy if we need to leave our Friday 2 in a compact for example.

Same thing for the luggage racks with QL3. Supports that attach the Moustache by Ortlieb panniers in a click. Easy!
FRIDAY 28.1 / FRIDAY 28.1 OPEN

Light, intuitive, economic and quiet.
Ideal for weaving in and out of traffic!

Live step-over frame for ease of use.

FRIDAY 27

- FRIDAY 27
- FRIDAY 27 FS
- FRIDAY 27 FS LIMITED
FRIDAY 27 IS STYLISH!

Just can’t beat it. This is our nod to the head towards “Dress down Friday.” But whether you wear a tie or not, Friday 27 is more than just a fashion statement.

FRIDAY 27 IS FUN, FAST AND COMFORTABLE

Its hydroformed frame, is not just a good looker, but also precise and efficient! And this year, there’s even a full suspension version! Wow!!!

Suspensions, cobbled streets, potholes... the world of the road is smoothed out by an unparalleled comfort, and without losing the legendary efficiency of our Friday 27! All this thanks to our exclusive suspension platform and our Moustache shock. We’re not going to go into the technical details and our manufacturing secrets, but we can assure you that thanks to that, we can ride stronger than ever, whatever the conditions. And for even better performance, we’ve mounted our new asymmetrical Just_Moustache rims with Superflite’s wide tires, not only does that offer amazing grip on turns, but incredible resistance to the abuses of the road. And as always, Friday 27 is powered by the mighty Bosch Performance or Performance CX motors, the uncontested reference!

FRIDAY 27 IS ALSO PRACTICAL!

Thanks to our exclusive ultra-practical and effective Hidden Power technology: even integrated, the standard Bosch battery is easy to install, easy to take off, easy to transport, easy to charge! Fantastic for daily use!

Just as incredible, the Moustache Quick-Parts system means we can fold the handlebar by 90° in just a few seconds. Very handy if we need to leave our Friday in a commuter example!

The luggage racks are compatible with most child seats on the market, they are strong and solid, being reliably fixed to the frame on two points via a tubular mudguard.

And our WTB SwiftX system, 3 seconds and you’ll be riding in the Moustache by Ortlieb panniers!

You’ve eaten your greens and green too much? Friday 27 has also grown with the addition of an XL size!
FRIDAY 27
Fun, fast, practical and comfortable, the perfect tool to have fun whilst getting about town!

What do you think of a bike to enjoy at the weekend... and for the rest of the week?
SAMEDI 28 IS VERSATILE!

Behind its ultra-comfortable Moustache handlebar you’ll ride as in days gone by, as a family, for a gentle ride, for tours, withideas, in the town, on country lanes, on trails, taking your time or as fast as you can, for a little or a long time.

SAMEDI 28 IS ELEGANT AND COMFORTABLE!

Bom into a good family, its hydroformed frame knows how to hold itself upright, but not too upright.

Its specific construction enables vibrations from the rear wheel to disperse along the top tube, well-sided by the frame and Continental tires, depending on the model chosen.

And thanks to its low center of gravity, it’s very stable.

The Sultur NEXUS21 rhythmized fork takes care of your arms...

and you can count on the Royal Wave or Shadow saddle to take care of your behind, sometimes even with a suspension seatpost, depending on the model chosen.

The legendary Moustache handlebar ensures a natural position for your hands for even more comfort on long rides.

SAMEDI 28 IS PRACTICAL AND BOUNTIFUL....

Its luggage rack with QL3 supports enables you to attach your Moustache by Orbea panniers in a single click, its wide platform also makes it compatible with a large range of child seats.

The exclusive Islander Moustache mud-guards, ultra solid and reliable, are perfectly centered on the wheel, protecting you in all conditions.

The Samedi 28 can see far ahead thanks to its powerful lights, 50 or 70 lux depending on the model chosen.

And in any emergency, you can count on the powerful and progressive Shimano hydraulic brakes to stop you in a hurry!

As for the lock under the seat stays, it means you can secure your Samedi 28.3 and 4 in an instant for any quick errand. And if you need to leave your bike for a longer period, the Axa chain that’s an optional extra enables you to easily attach it to anything.

And finally, whether the battery is integrated or not, it’s easy to install, easy to take off, easy to transport, easy to charge, fantastic for daily use!
The most accessible Samdi 28, intuitive, economic and quiet. At ease everywhere!

MOUSTACHE - SEASON 8
VERSATILE

MOUVENTES - SEASON 8
VERSATILE
This morning, I’m swimming to work by bike. At lunch, I’m using it to run a few errands. This evening, I’m going home on the forest trail. And this weekend it’s time to ride in the mountains.

Yes, yes, all that with my Sameli 27 Xroad Magic!!!

Thanks to its lively frame and its parts that combine the abilities of a town bike with those of a MTB.

Samedí 27 XROAD IS LIVELY AND COMFORTABLE!

Even super comfortable!
It’s become a reference through the balance brought together by its frame, the Sultinor XM
ATB fork, the Hutchinson tires and its suspensivel Mustache handlebar. This season I raise the bar again with a new full suspension version!

Whether it’s for hopping on and off the pavement or stringing together challenges off-road, it’s a real magic carpet ride!

And this without losing pedalling efficiency!! More magic!!!

We’re not going to go into the technical details and our manufacturing secrets, but we can assure you that thanks to the exclusive suspension design and the Mustache shock, we can ride stronger than ever, whatever the conditions!

And for even better performance and resistance, we’ve mounted our new asymmetrical OVRL Mustache rims.

Once again, it’s powered by the mighty Bosch Performance or Performance CX motors, the unbeatable references, which help you fly up the steepest.

Samedí 27 XROAD IS ALSO PRACTICAL!

Whether the battery is integrated or not, it is easy to install, easy to take off, easy to transport, easy to change! Fantastic for daily use!

The luggage rack with QL3 system, means you can attach the Mustache by Ortlieb partners in seconds!

Its wide platform also makes it compatible with a large range of child seats.

The exclusive tubular Mustache mud-guards, ultra solid and reliable, are perfectly centered on the wheels, protecting you in all conditions.

The Samedí 27 can see far ahead thanks to its powerful lights. 50 or 70 lux depending on the model chosen.

Samedí 27 Xroad, it’s up to you to find its limits. Or your own. :)}

SAMEDI 26/27 OFF
Climb, descend, lift, jump, attack or just ride appreciating nature? What a feeling!
What fun! And how better to enjoy the ride today, tomorrow, the day after...
HIDDEN POWER TECHNOLOGY

For this crazy project, our challenge was to integrate a standard Bosch battery, but also to minimize volume. We stretched our creativity and stayed with every single edge and millimeter, and we evolved transforming technology to its limits to create a dynamic aesthetic.

We worked hard in integration and aesthetics, aesthetics that we wanted both neat and dynamic as well as riding feeling, another key point of this project.

ALUMINIUM FRAMES

Made using an anodized quality aluminium from the 6061 series, the tubes are transformed. This is possible thanks to a special technology that injects high-pressure water into the frame tubes so that they take the shape of the mold. This proceeds allows for a greater control of the form and thickness of the tubes, resulting in superior quality and optimal performance.

GRAVITY CENTRE

Since we started, we have always paid special attention to the rider's center of gravity. Indeed, it influences the behaviour of the bicycle. By lowering it, the overall stability and efficiency of the bicycle is optimized.

Already proven at the lowest, we have been able to lower it and place it backward thanks to the integration of the battery, but also by lowering and placing backward the rear shock and motor link.
We could have talked of the 830g saving, of the several % increased stiffness, of the high-modulus and high-strength T1000 Fibers, the exclusive manufacturing process to control the inside and inside of the tube. We could have written 3 pages, but we preferred to keep it simple.

JUST CARBON

JUST LIGHTER, NICER, FASTER, MORE LIVELY!
FOREVER MORE FUN!!!
The telescopic seatpost is a must-have accessory! We therefore decided to engineer it on all our Trail and Race as well as on our 4.5 and 8. It’s already very smooth, and perfectly guided. We optimized its operation with a new, more effective hydraulic cartridge. It’s an advanced hard coil for an exemplary longevity. The inner ergonomics lever its perfectly under the saddle and also reduces friction for immediate response. The saddle is a very personal and so important point of contact, especially in electric. (We didn’t in particular your increased weight will allow you to climb steeper climbs. This is why the Moustache saddle is slightly curved to offer better support to the pelvis. It is also for this reason that we have used an anti-slip coating, to stay more easily on the front, even in the impossible climbs. The new coating is also more flexible and elastic, providing optimum comfort. Adjustments are often very personal, but, for more efficiency, we recommend a setting with a saddle nose positioned 2 to 4 mm lower than the rear.}

Guiding the chain in the best way and avoiding front sprockets is the mission of our proprietary system. It consists of a flange and two ‘figs’, one shaped and the other smooth, in order to increase the stiffness and the accuracy of the guide while minimizing wear.

The more you ride the MBT, the more you improve your skills, the faster you go, the harder you ride! The standard cranks are no longer stiff enough... So we decided to create our own model! They are forged and strengthened in order not to bend from the power of the most enthusiastic riders or from the wind-assisted jumps.

As we sought ways to make more capable 8 decades, 4 years ago we were the first to create a special 14 teeth sprocket for the Bosch motor... it has since become the standard. We followed by being the first to make use of wide range ‘10-41’ cassettes. Others have followed our path. We’ve gone as far as to make an 1146 or 1550 cassette standard on our high end models. The 11 speed and the specific spacing of the cassette gives more progressive gear ratios and less than a 2% gap between each pair, with a maximum range.

Thus the motor is always performing optimally. The autonomy is increased to the maximum possible, especially important in alpine area and on steep slopes.

"FAST CARBON..." is also a new 360mm hardtail in Thin 7000 труб, that’s both lightweight and tough and weighs only 220g.
EXCLUSIVE COMPONENTS

ALUMINIUM ASYMMETRICAL RIMS
27.5+ JUST MOUTACHE

Developed specifically for 27.5x2.8 tires, the JUST Moustache rim uses an aluminum EOS15. It is welded and heat treated and subsequently micro-polished blasted to further increase its stability and strength. The sidewalls are especially reinforced to withstand possible impacts. The asymmetrical profile ensures a homogeneous tension between the two layers of spokes, which guarantees a greater stability and a greater dynamism.

After many tests, we opted for an internal width of 35mm—for a perfect match with 2.8 tires. This is the ideal balance to maintain a “balloon” tire that does not penalize the steering or when leaning the bike while cornering.

Thus, the profile remains perfectly natural and dynamic. Just perfect! The annular break in the hub reduces friction as well as possible for improved dynamism and performance.

Why should we waste a single gram of battery with a poor set of wheels? – 27.5+ JUST MOUTACHE

CARBON ASYMMETRICAL RIMS
27.5+ JUST MOUTACHE

Also developed specifically for 27.5x2.8 tires, the JUST Moustache rim uses a high-strength Toray 7730 Graphite. Like the aluminum rim, we have achieved the best performance with an internal width of 35mm for a perfect match with 2.8 tires.

This is the best balance to maintain a “balloon” tire that does not penalize the steering or when leaning the bike while cornering.

Even more important on carbon rims, the sidewalls have a higher thickness to withstand the most severe impacts. As for our aluminum rim, this profile is asymmetrical to obtain a homogeneous tension between the two layers of spines which guarantees a greater stability and a greater dynamism. Hence, thanks to the use of carbon, we have even been able to increase the asymmetrical value without compromising the proper balance of the rim.

Thus, we can use only 28 spokes for direct transmission of effort (double turned to lower weight and inertia). Thanks also to the aluminum nipples that have a low grade.

The hubs are no exception. They are CNC machined with ultra-precision tolerances to allow the annular bearings to express themselves freely.

The true wheel is specific. It has 4 double reticle spokes for a better engagement and an effort distribution.

Essential. When we know the power and the potential of our e-MTB with a pair of wheels at 1680g, ultra-dynamic, extreme performance are waiting for you!
EXCLUSIVE COMPONENTS
JUST MOUSTACHE

31 years riding mountain bikes, 18 years on full suspensions and 6 years riding eMTBs... it is all these km traveled, all these sensibilities we find in our Grip Control rear shock!

THIS IS WHY OUR SHOCK ABSORBER HAS 4 DIFFERENT CIRCUMTS:

1/ LOW SPEED COMPRESSION CIRCUIT

The control of the shocks through this circuit makes it possible to absorb shocks of low and average intensity, and to keep the balance of the bike even on the sleepest climbs.

2/ HIGH SPEED COMPRESSION

In the event of a high impact, the increase in hydraulic load generates the proportional opening of the valves providing a high level of comfort and efficiency.

3/ LOW SPEED REBOUND CIRCUIT

This is the basic circuit of a rear shock. It’s the shock that directs the balance of the bicycle to the user’s weight. This range is deliberately limited on our shock as we are using a complementary rebound circuit called “high speed”.

4/ HIGH SPEED REBOUND CIRCUIT

This is the high-speed rebound circuit that plays a key role in the overall functioning of our rear shock, allowing a dynamic control of the rebound.

Indeed, depending on impacts intensity, instead of overly passing through the rebound valves, it allows a perfectly adapted rebound with a much better managed rebound with a much better managed pressure on the ground providing an insurance against the rear wheel, both up and down.

Wheels will feel much more balanced while providing a greater balance of the rear wheel and a superior grip on the rear wheel.

What will be the result of this work: The comfort of the rider with increased comfort and performance.

5/ OUR MUSTACHE, riding sensations, are at the heart of our concern. To further advance them, we have optimized the resistance of our suspension platform and to reduce the risk of over-suspension on the road and the rebound with a more progressive and more effective shock.

Our shock control system was introduced in 2018 has since again been enhanced and optimized for our new compression curves. It thus offers a lot of grip and allows to keep a good balance even in the clearest climbs.

6/ SUPER SAG: The rear shock is made of aluminum and carbon, it is forged than CNC and finally, 2 carbon enhancements are glued to boost the stability without increasing the weight.

Maximized at the maximum, the linkage rear shock thus contributes to improving the leveling of the corner grip.

7/ A Moustache module helps improve the rear shock from perspectives.

8/ A SAG indicator is positioned on the left side so you can easily adjust and find the optimum setting. Where the rider is on the saddle just position the red ring aligned with this indicator.

GRIIP CONTROL ULTIMATE REAR SHOCK

Our shock is also now available in an even more efficient Grip Control Ultimate version. The body and the shaft undergo a specific hard treatment to further reduce friction. Not only is friction reduced to improve sensitivity and responsiveness, but the Peep is increased.
Climb, descend, turn, jump, attack or just ride appreciating nature?
What a feeling! What fun! And how better to enjoy the ride today, tomorrow, the day after…

**SAMEDI 27 TRAIL 8, ELECTED ELECTRIC MTB OF THE YEAR 2018**

“F or this second edition of the electric election, the Samedi 27 Trail 8 joins the accolade for Moustache on the lastest trail at Vegy (Vaud). It wears with flying colors thanks to this version in aluminum.”

“Moustache, which developed its own brushless motor, has clearly shown that the Samedi has outperformed the others in motor function and efficiency.”

“practically everyone, noticed out its high performance and the way the motor is enahnced by the technical choices made to offer an unequalled performance.”

“Samied gets the best grade for every other relative to the motorisation.”

“the way the machine makes the Samedi ultra well performing in every circumstances. It suits pedalling, grip, mobility and, in this bike alone, brings an incredible level of performance, making it extremely versatile.”

“Martin finds it fun and efficient, loca- lised itself very well, very sturdy, [...]. A huge majority of the testers felt at ease on it, quickly feeling confident and ensured riding it. Practically everyone, said that they enjoyed riding on the top of the sky of the bike, but above all, it found its great handling and irreproachability, helped in all conditions.”

“in the end, it found to be so efficient and well-performing because of its geometry and to suspension, that nothing could go in the way of its ride to victory. The Samedi, it’s just bike, and it’s the jury that said it.”

**“A bike acclaimed by the jury for its considerable efficiency and its exceptional versatility”**

Since its start, Moustache thinks, works, sleeps, rides. Lives electric bike! Moustache is thousands of hours of testing, thousands of kilometers riding (EMTB) Moustache has always believed in electric MTB’s, that potential for opening riding to more people, the unparalleled source of fun they represent! Our first range already included two electric MTB’s at a time when hardly anyone believed it would take off. The Samedi 27 Trail 8 is elected electric MTB of the year 2018 by the jury of French magazine Velo Vert. This victory is the reward for 7 years of hard work. This goes straight to our heart. But this victory is above all collective and it’s also yours. Sprinkles, users, fans from the very beginning, we say to you a huge thank you!”
SAMEDI 27 TRAIL IS THE ELECTRIC MTB OF THE YEAR 2018!

More than the victory, we were developed at reading the testers’ comments about how they fell in love with the bike and how they sensed everything we put into it, all the little details we added to, so that riders bring you pleasure!

SAMEDI 27 TRAIL IS FRENCH CHAMPION!
With Julien Absalom in the saddle, it even won the double with his team mate Nils Perren-Guillaux. New victory, new celebration! Now it’s your turn to try!

SAMEDI 27 TRAIL IS EVEN STRONGER!
How could we do any better? Especially after such a win. Well, by increasing the number of models equipped with carbon wheels! Trail 8, 9 and 11 come with carbon wheels as standard for a more lively ride. And that’s not all: forks, forks and even more effective brakes complete the arsenal. Already incredibly high performing, it’s improved again!

SAMEDI 27 TRAIL IS EASY TO USE

Whether it’s for an undepmeasured champion or for one of us, it has “only” 140mm of travel making it accessible and yet formidable in every situation. Whether it’s seeking a result in a race or simply enjoying this Sunday ride, two characteristics reinforced by the “Thin line” and the leaned and moved basic center of gravity, further increase the liveliness and the overall balance of the bike. Once again thanks to the integration of our Hidden Power technology!

What’s more, we have further increased the ease of use with our new models. Trail 2, 10W and 10W with a brand new frame. On sizes S and M, the top tube has been lowered so it’s easier to get on and off the bike. And we have limited the travel to 120mm at the rear and 123mm at the front whilst opting for an even more accessible geometry. Our satisfaction is to see more and more users enjoying riding our bikes, whether you’re a beginner or an experienced rider!

SAMEDI 27X2 LIKES SHARING

Sharing your passion, emotions, sharing a moment, a new discovery, a little, a nice area, simply sharing a moment of fun... Samedi 27X2 is a unique way to double the fun!

And as it always sees double... it exists in 2 versions, MTB & touring. 2X more cheerful (or 2X more occasions to ride)

SAMEDI 27X2 HAS NO LIMITS!

Whether you ride as a couple, a family, with friends, there’s no limit to happiness on the saddle of the Samedi 27X2. With its two batteries with a total capacity of 1000Wh, you’ll have an incredible battery life. 2X further!

SAMEDI 27X2 POWER 2

To move Samedi 27X2, we chose the reliability for E-bike motors, the central position Bosch Performance CX, mounted at the rear. In order to synchronize front and rear cranks and give a true tandem experience (a huge challenge for our engineers), for stopping power we opted for Magura MT5, 4 piston brakes and 1000mm discs. For grip and comfort we rely on Maxxis 27.5x2.8 tires (Samedi 27X2 V71), Schwalbe SuperAir S-KO 2.55 tires (Samedi 27X2 V10), a Senator ADRN 140mm lock and an NCX seatpost. 2X cooler!

KIDS

The Mercedi 12 is a bit of a special project. It was born by accident... but with the Mustache! We designed it for our own satisfaction, but also for our children.

MERCEDEI 12

Available in 7 colors
Merced 12 is the only Moustache bike without electric, pedal assistance, but it may be the most important one in our collection. It's a bike to begin riding that will give young riders the desire to continue. It's a bike without compromises, that uses the same technologies as high-end adult models.

The Merced 12 is designed to teach kids how to maintain balance on a bike. It's reassuring for children, because they can control their balance and speed with their feet. This will allow them to progress rapidly, and within a few short months you'll see your child pushing off and lifting up his or her feet more and more often and for longer periods of time. And when he or she is finally old enough for a bike with pedals, you won't need training wheels. The balance bikes... it's magic!
Here is the list of specific accessories to equip your Moustache bike:

1. Moustache waterproof bags (by Ortlieb) for use with frame 23.3.
2.橘色 showing adapter for Emu FS.
3.橘色 showing kickstand.
4.橘色 showing kickstand bracket for MTB OFF! at OFF!
5.橘色 showing front basket support for the Lund 26.
6.橘色 showing front basket support for the Sund 2.9 or the Friday 2.

7.橘色 showing Moustache 27.5+ aluminum wheels.
8.橘色 showing Moustache 27.5+ carbon wheels.
9.橘色 showing Moustache side bottle cages.
10.橘色 showing bike 6D.
11.橘色 showing rack extensions for tall bags.
12.橘色 showing plug-in chain for frame lock.
13.橘色 showing rear carrier with Ortlieb 3.3 mounts.
14.橘色 showing mudguards A2 for Demanda 26, Sambo 27 OFF!, Sambo 27 XO V1.
